

BOSTON AND NEW YORK PLAY TIE GAME

Eleven Innings Fails to Decide Contest

**TAFT WILL CARRY ILLINOIS IS
CLAIM NOW MADE BY SUPPORTERS
AFTER REVIEWING ALL REPORTS**

Special to the Bonanza

CHICAGO, Oct. 9.—Director Mulvane, in charge of the western bureau of the republican national committee, in reviewing the progress of the campaign during the week, said today:

"Illinois is the pivotal state. With Illinois in the republican column, President Taft will be elected by a safe majority in the electoral college. He can be elected without Illinois because New York is no longer doubtful, but with this state giving him its electoral vote, the result is assured."

"And President Taft will carry Illinois. The only uncertainty at any time was the extent of the republican vote which would go to Col. Roosevelt. We now know that this will be a minimum. The normal republican majority in Illinois is 650,000. Even if Col. Roosevelt polled on November 5 all the votes he received in the primary last spring there would still remain practically 400,000 republican votes against him. As a matter of fact, Roosevelt will not get 10 per cent of his primary vote. Our polls in many counties show that he will not get over 1 per cent. The danger that Roosevelt can, by his bolting, attempt to organize a third party, defeat the republican ticket in this state no longer exists."

"The republicans of Illinois are appreciating the great opportunity which is afforded them to continue the policies and laws, which, under republican administration, have given this country unexampled growth and prosperity and which insure a continuance of the safe and steady progress of the past 16 years."

"Our democratic opponents now realize that Mr. Taft is the one candidate the most defeat. They know, too, that he is gaining strength every day. Instead of now predicting that Woodrow Wilson will be elected without a struggle, they are fighting desperately to win."

"They have changed their plan of campaign. Instead of keeping Governor Wilson at home to deliver academic speeches to delegations—which did not appear—they have him traveling night and day to secure publicity and arouse enthusiasm. They confess that they have been over-confident."

"But there is one part of their campaign which cannot be and will not be changed. The chief democratic issue is free trade. This issue will not win in a country made great and prosperous by the protective system. Manufacturers, business men, workmen, farmers and salaried employees, all vitally concerned in continuing present business conditions, do not have to wonder what will happen if Wilson is elected. They know. There will be business uncertainty and anxiety during the many months of waiting for tariff legislation, and when the free trade law has been enacted, foreign manufacturers will grow rich at our expense. American workmen will be idle. Banks will curtail their loans and deny capital for investment because American money will be sent abroad."

"Upon this plain business issue, and because President Taft stands for representative popular government as against radical, untried and unsafe theories, we will win."

"The time has passed when President Taft had no chance of election. The tide is now running strongly toward him, due to a realization in the commercial and agricultural world of what a democratic victory would mean. He can and will be elected."

AT THE BIG CASINO—Something new tonight. Program changed every night.

S. W. Steffner, manager of the Manhattan Consolidated Mining company, thinks he has solved the whole difficulty about the treatment of deep ores in that camp. And he has not another think coming either for he has the opinion and reports of some of the most eminent mining engineers and metallurgists in the country back of his assertions. Moreover he is going to back them to the extent of \$10,000 at the first crack out of the box. That's the way he feels about it.

The Consolidated has had trouble in extracting values. This occurred after entering the sulphide zone where it seemed impossible to gain any satisfaction from the ordinary milling methods. Shipping would give the transportation companies most of the profits so that was out of the question. The suggested solution, which has been adopted, is to roast the ores and then treat them with a cyanide bath without the intervention of the stamp batteries. The ore after passing through the tube mill goes to the roasting furnace and then to the ordinary cyanide process.

Carload lots of ore have been subjected to experimental tests with the utmost satisfaction and the result is that yesterday Mr. Steffner concluded a contract which calls for the immediate erection of a roasting furnace. The capacity will be 100 tons daily and it is probable that the precedent will be followed by other mining companies in Manhattan. Oil will be used for fuel as another contract has been signed between the Union, Oil company and the Manhattan is guaranteed a low rate for a long period making the cost of the oil delivered at the furnace approximately \$2 a barrel. A tank wagon service will be installed. Complete details of the improvement and preliminary contracts were agreed yesterday between Mr. Steffner and Horace Pomeroy, a mining engineer of San Francisco who was instructed to go ahead with all speed. The Wittenberg company will do the hauling, which will amount to a considerable feature, as a single specification calls for the delivery of 15,000 fire brick to be used in the construction.

The Big Four company has inserted a time limit in its contracts for the building of its new mill calling for delivery of the property ready for operation on the first of January, but it is doubtful if this can be done as it will take six weeks to assemble the material.
